

novASTREAM 6000

Gas Analyser

N₂

ppm and ppb analysis using Advanced Plasma Detector

The new NovaSTREAM 6000-N2 Gas Analyser from AGC Instruments is based around the unrivalled Advanced Plasma Detector. This detector is both highly accurate and reliable for the continuous monitoring of N₂ in Ar. Utilising the latest advanced technologies, this analyser provides customers with the precise results they require with little effort.

The Advanced Plasma Detector provides measurements to less than 100 ppb with speed. Using the large colour interactive touch screen, the NovaSTREAM 6000-N2 analyser is straightforward to use and set-up with all functionality easily accessible and navigable with minimal training required.

With the integration of Flow Sensors, a Pressure Release Valve and 7 voltage free alarm relay contacts, including one for the sample flow, all critical monitoring is automated and provides peace of mind to the operator. Further verification is provided by voltage free contacts for switching in calibration gas inputs externally to support the auto-calibration routine. Both Calibration and Alarm records are maintained also with a fall-back option to restore factory settings. Therefore, the NovaSTREAM 6000-N2 provides peace of mind and an exceptional performance at all times.

The precise results obtained from this analyser can be transmitted via an array of communication modules such as: 4-20mA (2 off), mV Signal, USB (2 off) and VGA outputs. Active 4-20mA, Ethernet, RS-232 and RS-485 outputs are also available as optional extras. This allows the analyser to be integrated seamlessly into all analytical infrastructures worldwide.

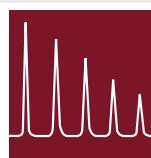

The modular design with a drop-down front panel for easy access to the electronics allows for trouble-free maintenance and servicing. It is both cost effective and reliable with a low cost of ownership due to the low gas and power consumption. The AGC Engineering Team will custom design and test an analytical solution to meet your application and all systems are designed with volume optimised pipe work using only 1/8" VCR face seal fittings. Therefore, this robust system ensures an excellent stability, sensitivity and a long working life.

Features

- Advanced Plasma Detector (APD)
- Finely-tuned Detector with Minimal Drift & Noise
- Highly Sensitive to < 100 ppb
- Fast Detector Response: < 5 seconds (T₉₀)
- Long Term Stability & Sensitivity
- Large Colour 7" LCD Touch Screen
- Fully Automated use with intuitive GUI
- Integrated Configurable Alarms System with Alarm Record
- Added Sample Flow Alarm
- Integrated Diagnostics System
- Flow Sensors and Pressure Release Valve
- Voltage free contacts for switching in calibration gas inputs externally
- Auto-Calibration Routine with Calibration Record
- Internal storage of results up to 24 months and data trending via PC
- 2 x 4-20mA, 1 x mV Signal
- VGA & 2 x USB Outputs
- Active 4-20 mA option
- Increased Connectivity with Ethernet, RS-232 and Modbus TCP/IP options
- Modular System Design & Drop-Down Front Panel for easy maintenance and servicing
- Cost Effective and Reliable
- Economical Power Usage (< 100 Watts) & Gas Consumption (minimum inlet pressure of only 30 kPa)
- Restore Factory Settings function for peace of mind.

Principle Of Operation

The NovaSTREAM 6000-N2 Analyser is designed for the continuous monitoring of N₂ in Ar. It is a significant upgrade to its successful predecessor which has a large installation base in argon specific applications throughout the world.

The instrument uses a high frequency and high voltage power supply to ionise the gas, producing positively charged ions and free electrons, thus forming a plasma environment in which the N₂ molecule is separated into atoms. The positively charged ions and free electrons accelerate to the negative electrode and the positive electrode respectively under the action of an electric field.

As a result of the collision, the ions and electrons transfer their energy to the atoms, causing the gaseous atoms to be excited. The outer electrons of the excited atoms then undergo an energy transition and emit a unique spectrum when they return to their ground state. By detecting this unique spectrum, the concentration of trace nitrogen is analysed.

As a result of these developments, and when combined with the use of a moisture trap, the detector is not affected by moisture or other impurities in the sample background. This is because it solves the problems of baseline fluctuation due to pressure variations, and the impacts of quenching molecules such as H₂O in the measurement. Drift and Noise are reduced substantially as a result.

Typical Applications

- Argon Purification Plants
- Steel Industry
- Air Separation Units
- Welding Gas Manufacturing
- Specialty Gas Manufacturing Plants
- Doping Gas Manufacturing
- Filling Stations for Cylinder & Trucks
- Semiconductor Industry
- Chemical Plants
- Wafer Fabs in Electronic Industry

Sample Handling

The NovaSTREAM 6000-N2 Analyser requires a Moisture Trap on the Sample Inlet connection which can be supplied by AGC Instruments. This will protect against the detrimental effect of H₂O on the measurement in terms of quenching, and subsequently reduces the drift and noise.

A Zero Calibration Gas is also essential and use of the AGC NovaPURIFIER Zero Gas Purifier is recommended. This 19" Rack (3U) Purifier links seamlessly with the NovaSTREAM 6000-N2 analyser and guarantees a stable supply of zero calibration gas (purified to Grade N6.5 or better) with low ppb impurity levels. This ensures that consistent and highly accurate readings are achieved which, in turn, leads to a longer instrument life span. Furthermore, better sensitivities are achieved which is essential for the successful operation of the NovaSTREAM 6000-N2 analyser.

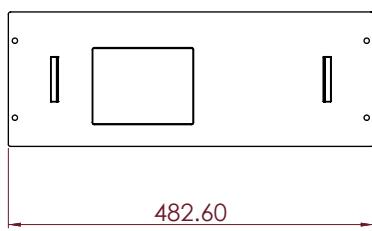

Please consult with the specific brochure for the AGC NovaPURIFIER. AGC Instruments can also discuss any other sample handling issues you may have.

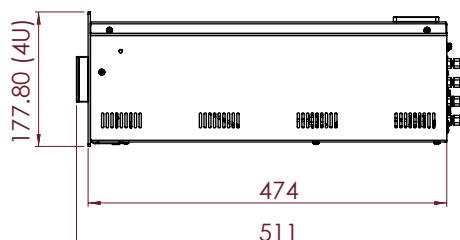

Specification	
Detector	Advanced Plasma Detector
Range for N ₂	0 - 10 ppm or 0 - 100 ppm
Limit of Detection (LOD)	< 100 ppb
Precision	± 1% of Range
Repeatability	± 1% of Range
Response Time	< 5 seconds for 90% step change @ 75 mL/min
Interface	7" Industrial Grade Colour Touch Screen Control
Outputs / Communication Modules	2 x 4-20mA outputs (Isolated) 1 x mV Signal output 1 x RS-232 2 x USB VGA RS-485 (Modbus/Profinet)* (option) Ethernet* (option) 1 x 4-20mA output (Active)* (option)
Alarms	7 x Voltage Free Alarm Relay Contacts (including one for sample flow) Alarm Record
Calibration	Auto-Calibration Routine* (option) Voltage Free contacts for switching in the calibration gas inputs externally Calibration Record
Data / Results	Data Trending via PC connection and 24 months internal storage
Gas Connections	1/8" VCR Face Seal Fittings
Sample Flow	50 mL/min to 150 mL/min Flow Sensors installed
Inlet Pressure Range	30 kPa to 80 kPa
Operating Temperature	5° to 45° Celsius
Power Supply	100 - 120 VAC / 220 - 240 VAC, 50/60 Hz
Power Consumption	≤ 100 Watts
Weight	≤ 15 Kg
Dimensions	482 (W) x 511 (D) x 177 (H) - 4U 19" Rack

* Optional Extras - Subject to system design/configuration

Company Profile

AGC Instruments Ltd.

AGC Instruments is a leading manufacturer of Gas Analysis Solutions to all users requiring a Quality Control or identification of their gas stream. We have over 59 years experience in providing our customers with their "Total Gas Analysis Solutions". We work closely with all customers to ensure they obtain the analytical solution that meets their needs and a system that is easy to use and understand. All AGC distributors are extremely experienced and factory trained to the highest standards, offering you a complete after sales support service.

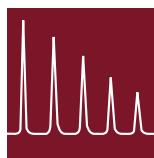

The wide range of Detectors available can be customised to measure unique gas streams and we place an emphasis on the continuous development of our analytical solutions. Our worldwide reach with strategic partners ensures that you have peace of mind and after sales care that are important to your operations.

Aftersales Care

AGC Instruments are committed to providing and maintaining quality systems from customer liaison to technical knowledge through to System Design and Delivery. We believe that our After Sales Support to the customer is one of the most important services we can offer. Each Distributor has been carefully selected and trained to ensure our customers receive the best possible service. Furthermore, online customer support and direct support are available to deliver a comprehensive support package.

NovaSTREAM 6000 Applications

Total Hydrocarbons Analysis

% Ar in O₂ Analysis

Trace N₂ in Ar Analysis
